

# Common Food Poisoning Symptoms

Food poisoning is no fun. In most cases, **your body will heal itself as long as you drink plenty of fluids until the GI problems clear up.** Sometimes, though, you're going to need medical help, especially if you're older, have a weakened immune system, or have severe or long-lasting symptoms. (Infants and pregnant women are also more likely to have a serious bout.) Here are the bacteria, toxins, viruses, and parasites in food that are most likely to make you sick and the symptoms they typically cause. 🍷

	How soon you typically get sick	How long sickness typically lasts	Diarrhea	Vomiting	Fever	Abdominal pain	Other symptoms	Possible complications	WHAT TO DO
<i>Bacillus cereus</i>	4-16 hours	12-24 hours	✓	✓		✓			Stay hydrated
<i>Campylobacter jejuni</i>	2-5 days	2-10 days	✓ (may be bloody)	Sometimes		✓		Guillain-Barré Syndrome	Stay hydrated
